

How the Green Cone Works

Sunlight

Provides energy source for the digestion process.

Double-walled solar cone

Creates a heat trap of circulating air to encourage bacteria growth.

Removable Lid

For easy access to digestion chamber.

Soil

Filters out smells and prevents access by flies

Natural Micro-organisms and Worms

Migrate freely in and out of the basket and break down the waste.

Nutrient Rich Water

Enters surrounding ground

Digestion Chamber

Aerobic conditions to reduce methane production.

Over 90% of the waste material in your Green Cone will be absorbed as water by the soil.
